

Lift, Drag, Airfoils

1. Object in motion wants to stay in motion.

→ 2. $F_{\text{net}} = \text{mass} \times \text{acceleration}$

3. Action, equal and opposite reaction

$$F_{\text{net}} = 0$$

Unaccelerated
Flight.

1. Bernoulli:

2. Barn / Newton

Mean Camber Line

Newton

Relative Wind

Lift Equation

$$L = \frac{\frac{1}{2} \rho \underline{V}^2 S C_L}{2}$$

ρ = Air density

V = Velocity

S = Surface area

C_L = Coefficient of Lift

A

Slow

Basic Torque

$$\text{Torque} = \text{Force} \times \text{Radius} \\ (\text{moment})$$
